

FAA Safety Team presents:

GAJSC Topic of the Month - 'Flight Risk Assessment Tools'

Hazard identification and risk assessment are essential components of effective safety management systems. Pilots are required by regulation to acquire information relevant to proposed flights and plan for how to deal with hazards identified during the information gathering process. Flight Risk Assessment Tools are designed to assist with the risk assessment process. The GAJSC recommends that pilots use FRATs to improve their risk assessment processes. The General Aviation Joint Steering Committee (GAJSC) and your local FAA Safety Team (FAASafetyTeam) are working together to present a monthly topic that improves aviation safety. The topics presented are "Managing Unexpected Events" and "Flight Risk Assessment Tools". The GAJSC is working to improve General Aviation safety through data driven risk reduction efforts that focus on training, education, and outreach.

Directions: This event will be held in the main terminal building. For detailed driving directions, please use internet software such as GoogleMaps, MapQuest, Rand McNally or similar.
